EXPERIENCE

Senior Software Development Engineer (Backend)

May 2024 – Present

Flipkart (via Wissen Technology)

Bangalore, India

- Contributed to **Flash**, Flipkart's internal load-generation platform used for large-scale API stress testing, reliability validation, and performance benchmarking.
- Designed and deployed high-concurrency backend APIs using **Java**, **Spring Boot**, **MySQL**, **Redis**, enabling realistic simulation of production-scale traffic patterns.
- Engineered asynchronous and parallel processing using **Kafka**-driven event architecture, improving throughput and reliability under heavy production load.
- Optimized report-generation APIs through query tuning and improved data-access patterns, reducing response latency by **80%**.
- Led migration from **MySQL 5.x to MySQL 8**, leveraging optimizer and indexing enhancements to improve query performance by **45%**.
- Managed production deployments and independently debugged distributed-system issues across **AWS** and **GCP** environments using CI/CD pipelines.
- Leveraged AI-assisted developer tools such as **GitHub Copilot** and **Cursor** to accelerate development, debugging, and code optimization, reducing development turnaround time.
- Mentored engineers, conducted technical interviews and code reviews, and contributed to improving engineering standards and backend development practices.

Software Development Engineer

Nov 2022 – Apr 2024

Xpressbees

Bangalore, India

- Architected and implemented a high-throughput cross-border logistics application using microservice-based architecture to support growing shipment and customer operations.
- Led development of Customer Onboarding and Shipment Tracking systems, reducing onboarding turnaround time by **30%**.
- Developed REST APIs, webhook integrations, and **Kafka**-based event-driven systems for order management, enabling reliable communication across microservices.
- Optimized high-volume tracking APIs using **Redis caching**, enhancing response performance by **40%** and reducing database load.
- Collaborated with cross-functional teams to debug production issues, fast-tracked deployment reliability, and streamline release cycles.
- Implemented frontend enhancements using React, accelerating delivery velocity and reducing dependency on frontend teams.

Software Engineer

May 2022 – Nov 2022

Nouveau Labs

Bangalore, India

- Engineered a multithreaded automated-calling platform capable of handling concurrent outbound processing at scale, reducing manual operational effort by **50%**.
- Integrated Twilio APIs to build scalable and reliable outbound calling infrastructure, boosting automation efficiency.

Software Engineer

Dec 2019 – Apr 2022

Accenture

Location: India

- Developed and maintained enterprise-grade Java applications supporting large-scale internal business operations.
- Built real-time reporting and operational visibility tools improving monitoring and business transparency.
- Integrated dynamic dashboards and data visualizations using HTML, CSS, and JavaScript for Veeva CRM workflows.
- Resolved critical enhancement and production issues, contributing to improved system stability and team productivity.

EDUCATION

Scaler

2022

Specialization in Software Development & Problem Solving

Haldia Institute of Technology

2019

B.Tech in Information Technology

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript

Backend: Spring Boot, REST APIs, Microservices, Distributed Systems, Multithreading

Databases: MySQL, Redis, MongoDB

Messaging/Event Streaming: Kafka, RabbitMQ

Cloud/DevOps: AWS, GCP, Docker, CI/CD

Frontend: React, HTML, CSS, JavaScript

Concepts: Scalability, Concurrency, System Design, Caching, API Design, Performance Optimization, Data Structures & Algorithms
